

1:1 RATIO – (SQUARE)

HOW TO PRINT

1. Do not exceed the maximum size which equals 240 DPI
2. Print at home with a photo printer or at your local print shop or photo centre.
3. The image can be resized to anything within the displayed parameter and inbetween.

TIPS

1. For best results we suggest printing on high-quality paper.
2. Mobile Tip: Save to Files (not Photos) to avoid compression.
3. Glossy finishes can create reflections that interfere with visibility, potentially obscuring key details needed to solve the puzzle.

Please preserve the original aspect ratio. Some differences or clues are intentionally positioned near the edges, and altering the frame could result in lost game information and an incomplete puzzle experience.
